

AMENDMENTS TO THE SPECIFICATION

Please amend the paragraph beginning on line 8 of page 5 as follows:

Provided that the validation from the enterprise database comes back positive, (meaning that the requester is a member of the enterprise, either formally or by contract, as a contractor employed by the company) the request then goes to another web page in which the requester, if necessary, (based on employee type or service type, box 104) is asked to review a risk acceptance statement that must be agreed to prior to submitting the order, as shown by box 105. A web ~~page~~ ~~pages~~ takes the requester automatically to a web page containing the risk acceptance statement. The user then clicks OK for acceptance, via an automated button on the displayed web page. Once accepted, the system automatically emails the information to the requester's manager, in which the manager is then given the web address (URL). Upon reading the e-mail message, the manager clicks on the web location within the email to bring another web page for approval (disapproval), as shown in box 106. The manager can accept or reject this request.
